About Me

My fascination for software development took me from knowing nothing about web development, to building React JS applications on my own in just a few months. By building these applications I gained experience with fundamental software development practices like designing responsive UIs, implementing an architectural pattern for the global state management of applications with Redux, building React JS applications using functional components and React Hooks, making HTTP requests to public APIs, rendering data from APIs in the UI, implementing user authentication, and integrating CRUD operations to interact with a back-end server.

Projects

Spotify App

- A *Spotify*-inspired app where users can search for songs/tracks, artists, and albums that match with whatever term gets submitted on the search bar. Anything selected will be opened in the Spotify website in a new tab.
- Technologies used: React JS, Semantic UI, Axios, Spotify Web API.
- Role: I built the frontend React JS application.
- Live Version: <https://spotify-rho-azure.vercel.app/>
- Source Code: <https://github.com/yanrivera19/spotify>

To-Do List App

- A full-stack to-do list app where users can add, edit, or delete to-do's from a to-do list. To use the app, users have to be signed-in to a Google account.
- Technologies used: React JS, Redux, Semantic UI, Axios, JSON Server (server), and OAuth 2.0.
- Role: I built the frontend React JS and Redux application, and the JSON backend server.
- Demo: <https://yanrivera19.github.io/project2-gif.html>
- Source Code: <https://github.com/yanrivera19/todo-list-app>

The Hacker News App

- A *The Hacker News*-inspired app where users can search any news on the search bar, page through results using the pagination at the bottom of the page, and when selecting a news article, the link to its source publication will be opened in a new tab.
- Technologies used: React JS, Redux, News API, Axios, and Bootstrap.
- Role: I built the frontend React JS and Redux application.
- Demo: <https://yanrivera19.github.io/project1-gif.html>
- Source Code: <https://github.com/yanrivera19/hackernews-app>

Skills & Technologies

HTML, CSS, JavaScript, React JS, Redux, Flexbox, Axios, Bootstrap, Responsive Web Design, Git, GitHub, Command-line, NPM, OAuth 2.0, JSON Server, Semantic UI

Education

Aug. 2013 to Mar. 2018

B.A in Psychology from University of Puerto Rico, Río Piedras Campus
GPA: 3.62
