Projects

The Hacker News App

- A *The Hacker News* clone app where you can search any news on the search bar, page through the results using the pagination at the bottom of the page, and select any news you would want to see in detail by clicking it. A link containing the selected article will then be opened on a new tab.
- Technologies used: ReactJS, Redux, News API, Axios, and Bootstrap.
- Role: I built the frontend ReactJS and Redux application.
- Source Code: https://github.com/yanrivera19/hackernews-app

To-Do List App

- A full-stack to-do list app where you can add, edit, or delete to-do's from a to-do list. The app can only be used if you're signed in to a Google account.
- Technologies used: ReactJS, Redux, Semantic UI, Axios, JSON Server (back-end/database), and OAuth 2.0 (authentication).
- Role: I built the frontend ReactJS and Redux application, and the JSON backend server.
- Source Code: https://github.com/yanrivera19/todo-list-app

Spotify App

- A *Spotify* clone app where you can search for songs/tracks, artists, and albums that match whatever term you submit on the search bar. When you select a song, artist, or album, it will be opened on the Spotify website on a new tab.
- Technologies used: React, Semantic UI, Axios, Spotify Web API.
- Role: I built the frontend ReactJS application.
- Source Code: https://github.com/yanrivera19/spotify

Skills

HTML, CSS, JavaScript, ReactJS, Redux, Bootstrap, Responsive Web Design, Flexbox, Git, GitHub, Command-line, JSON Server, Semantic UI
